

Annual Review Meet

Session 2022-23

Presented By:
Yogita Sonune
Dept. Production

Content

- Trials conducted and their status
- Important projects ad activities
- Compiled yield of all fruit varieties
- Compiled data of qualitative analysis of fruit varieties
- Data collected
- Cost incurred in research of fruit crops.

Trials Conducted and their status

1. Effect of Ethrel dipping duration on ripening of mango fruits var. VNR Umang
2. Effect of different rooting solutions on root growth of Moringa cuttings
3. Air-layering trial in Moringa
4. Effect of pruning on bearing habit of mango plants
5. Experiment on Number of fruits v/s the size of fruits
6. Color breaking trial in Lime and Lemon fruits
7. Inducing self pollination in Guava VNR Bihi : Phase-1
8. Inducing self pollination in Guava VNR Bihi : Phase-2

Trial -1 : Effect of Ethrel dipping duration on ripening of mango fruits var. VNR Umang

- **Objective :** To study the difference in fruit color and sweetness of mango fruits var. VNR Umang with different dipping duration of Ethrel
- **3 Treatments :** T1- Quick Dip, T2- 1min, T3- 2 mins and Check (not dipped at all). Dose of Ethrel used 13ml/10 liters of water. 10-10 fruits were used for each treatment. Fruits were observed every 24 hours for 2 days.
- **Date of experiment** – 10th May, 2022.
- **Date of Observation** – 12th May, 2022
- **Conclusion :** No significant difference was observed in appearance of the fruits as such. Naturally ripened fruits had highest TSS i.e. 18.7 °B, followed by T3- 18.2 °B.

Trial -2 : Effect of different rooting solutions on root growth of Moringa cuttings

- **Objective :** To find one suitable solution or combination which gives healthy and best root development for multiplication of Moringa plants
- **8 treatment solutions,** which includes 1% Sucrose, 5% Ascorbic acid, 5% Citric acid, 10% Ascorbic acid + 10% Citric acid, 200 ppm Cultar, 400 ppm cultar, 600 ppm cultar and 1500 ppm IBA + 1500 ppm NAA. 45 cuttings were planted for each treatment.
- **Date of experiment –** 27th May, 2022.
- **Date of Observation –** 4th July, 2022
- **Conclusion :** Maximum but not much significant root development was observed in case of Sucrose 1% Solution (8%).

Trial -3 : Air-layering trial in Moringa

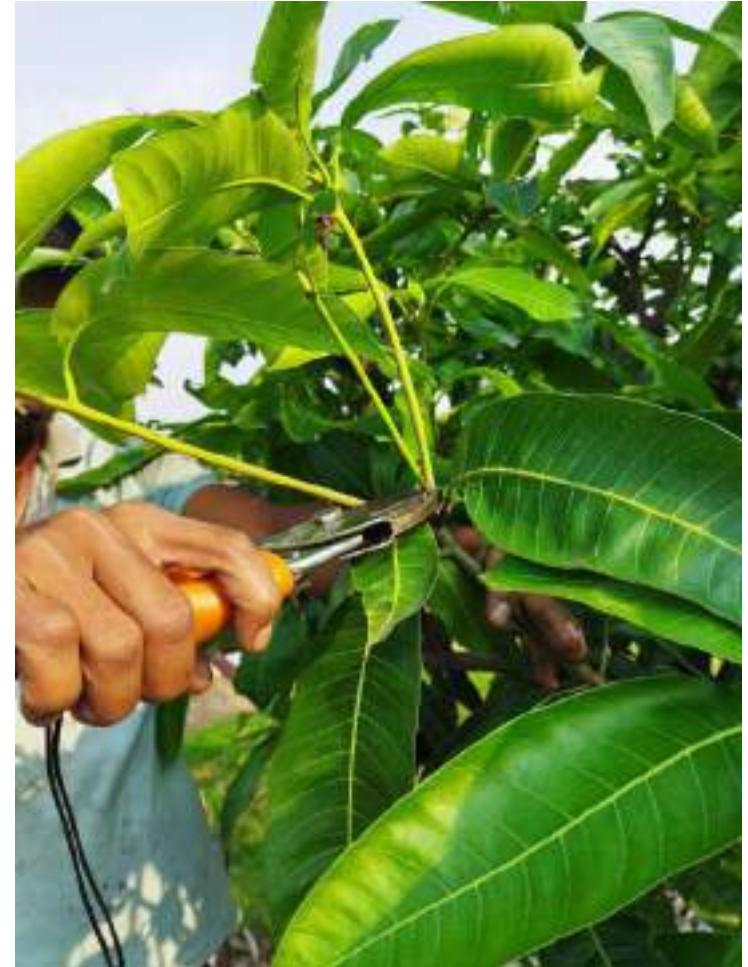

- **Objective :** To find out suitable root promoting solution having best root growth in air layered Moringa
- **3 Treatments :** T1- NAA 3000ppm, T2- IBA- 3000ppm, T3- Sucrose 1% and Water as check. Semi lignified branches used for treatment. Variety - Thar Harsha.
- **Date of experiment** – 22nd August, 2022.
- **Date of Observation** – 25th September, 2022
- **Conclusion :** Not successfull. Every layered branch dried.

Trial -4 : Effect of pruning on bearing habit of mango plants

- **Objective :** To estimate the effect number of branches to be kept in a whorl on the bearing habit of mango plants.
- **4 treatments include** - T1- 1 branch, T2- 2 branch, T3- 3 branch, T4- 4 branch, with Check (not pruned). Every treatment have 2 replications.
- **Date of experiment** – 21st Oct, 2022.
- **Date of Observation** – 2nd March, 2023
- **Status** – Not Concluded yet.

Trial -4 : Effect of pruning on bearing habit of mango plants

Variety Name	Plant Number	Number of branches in whorl	Flowering	Fruiting
Amrapali	1P	1	No	No
Dudhpenda	2P	1	Yes	Yes
Amrapali	4P	2	No	No
Vastara	4P	2	Yes	Yes
Dudhpenda	1P	2	No	No
Dudhpenda	3P	3	Yes	Yes
Dudhpenda	4P	4	Yes	Yes
Ratna	1P	Check	Yes	Not yet

Trial -5 : Experiment on Number of fruits v/s the size of fruits

- **Objective :** To study the effect of number of fruits kept per plant on the size of the Custard Apple VNR Madhur fruits
- 7 plants selected for **7 treatments** viz, T1- 5 fruits, T2- 10 fruits, T3- 15 fruits, T4- 20 fruits, T5- 25 fruits, T6- 30 fruits and T7- 34 fruits.
- **Date of experiment** – 15th September, 2022.
- **Date of Observation** – December, 2022
- **Conclusion :** No significant different was observed in fruit weight of all the treatments.

Trial -5 : Experiment on Number of fruits v/s the size of fruits

Plant Number	Number of fruits	Average Fruit weight (kg)
13P	5	196.5
9P	10	333.3
14P	15	290.7
7P	20	252.4
2P	24	318.9
5P	30	266.2
6P	35	259.5

Trial -6 : Color breaking trial in Lime and Lemon fruits

- **Objective :** To find out a suitable method which induces uniform color development in Lime and Lemon varieties
- **3 treatments** were used to induce color breaking in fruits.- 1. Covering with news paper, 2. Covering with gunny bag, 3. Dipping in Ethrel 500 ppm solution.
- **Date of experiment** – 6th December, 2022.
- **Date of Observation** – 12th December, 2022
- **Conclusion :** Earliest color development was visible in Ethrel dipped fruits (Day 3 and 4). Most uniform color development was visible in fruit covered with Gunny bags in Day-5.

Trial -7 : Inducing self pollination in Guava VNR Bihi : Phase-1

- **Objective :** To find out the success rate of self pollination in guava crop.
- Flower buds of Guava VNR bihi were selected and bagged before anthesis to induce self pollination.
- **Date of experiment** – 28th Nov, 2022.
- **Date of Observation** – 2nd Feb, 2023.
- **Conclusion :** No seed formation was seen the fruits after 30 days of fruit set.

Trial -8 : Inducing self pollination in Guava VNR Bihi : Phase-2

- **Objective :** To find out the success rate of self pollination in guava crop.
- Flower buds of Guava VNR bihi were selected which were about to open a day after. Such flower buds were hand emasculated and then pollinated, and some were bagged and shaken next day at the time of flower opening.
- **Date of experiment** – 11th Feb, 2023.
- **Date of Observation** - 16th March, 2023
- **Status** - Ongoing

Important projects/activities throughout year

Guava Segregating Population

- Plants under 3rd fruiting season
- 1st season – April to July
- 2nd season – October to December
- 3rd season – January to Mid March
- Total population – 1655
- Population in 3rd season – 163
- Selected this season – 22
- Arka Rashmi X VNR Rubina – 2 plants
- Arka Poorna X BARC-22 – 10 plants
- Punjab Kiran X VNR Rubina – 10 plants
- Uprooted this season – 64

Parent cross : Arka Rashmi X VNR Rubina

Nematode Screening

- Started with laboratory Set-up
- Analyzed two samples of Polybag media of Guava VNR Bihi and Custard apple VNR Madhur.
- Analyzed both roots as well as media of the nursery plants.

Date of Observation	Sample Name	Soil sample (g)	Volume of extract (ml)	Nematode per quarter	Nematode in 5 ml of extract	Nematode population in sample	Nematode population per kg of soil
17-02-23	Sample-1	100	40	0	0	0	0

Media samples kept of extraction. Date : 15.02.23

Sample analyzed under microscope. Date : 17.02.23

Drying of Fig

Step-1
Fruits harvested at proper stage. Wash the freshly harvested fruits

Step -2
Dip the fruits in hot boiling sugar syrup (2:1) for not more than 5 minutes

Step-4
Dry the fruits in sunlight covered with nets, until the fruit starts to shrink and turn brown

Step-6
Press the fruits in between Chapatti maker and then shade dry for 1.5-2 days.

Step-5
Once dried, wash the fruits in hot water again/give steam to the fruits till the soften. Dry the fruits to remove any moisture
